

Cattle Health Software

ChuteSideTM

Livestock Veterinary Services, a food animal consulting veterinary practice in Lethbridge, Alberta is pleased to introduce Chute-Side™, a A chute-side friendly feedlot health computerized record keeping system that is easy to use and simplifies the lot health billing processes. The system is designed to allow for both individual animal management, and operations that only administer treatment tags. On-line treatment protocols, and automatic drug dosing calculations make animal treatments easy and accurate. The program also tracks treatment residues, calculated drug-free dates, and generates lot shipping reports to ensure that all treatment withdrawal times are reported. A comprehensive group of reports allows for tracking of medicine and labor costs as well as disease incidences.

Chute-Side can be used as a stand alone program or run on a networked environment with many different computers. The program is password protected, and allows different users that have different access to various aspects

February 2008 Key Features

User friendly

Time saving

On-line proto-

Health monitorina

Medical billing \
